

## OUR MISSION

“ To use advanced technologies and innovative end-to-end solutions to reduce the environmental impacts of Fats, Oils and Grease (FOG) in order to protect our health and wellness, our marine ecosystem, and the quality of our freshwater supply ”

HEALTHIER COMMUNITY  
HEALTHIER ENVIRONMENT

**FOG**  
FATS, OILS, AND GREASE

ADVANCED MEASUREMENT  
AND MONITORING OF  
FATS, OILS AND GREASE

# WHAT IS FOG?

FOG refers to Fats, Oils and Grease from food preparation and kitchen clean up. When dumped down the drain, FOG solidifies in the sewer lines, causing clogged pipes.

# THE PROBLEM

FOG clogged pipes cause a variety of issues such as:

- Sewer backups and spills
- Flooded homes / business
- Business Closure
- Significant property damage
- Lift station pump failure resulting in sewer system overflows
- Destruction of marine life and habitat
- Hazard to public health
- Costly sewage systems repair and replacement

# OUR SOLUTION

FLO-CORP manufactures a system that can measure and monitor the amount of FOG in a grease trap or interceptor. The monitoring device measures multiple interface levels and alerts when pump-out is necessary to prevent costly FOG overflow. Featuring smart technology, the data is then transmitted to a cloud-based portal where FOG levels can be monitored in real-time. FLO-CORP also manufactures a formula that will eliminate FOG and produce FOG free water to discharge into the sewer. FLO-CORP is focused on FOG control with a vision to protect our health and environment.
